EDUCATION

Cairo University

Bachelor of Science in Computer Science and Artificial Intelligence

GPA: 3.75

Giza, Egypt

Sep. 2021 – Jul. 2025

EXPERIENCE

Geospatial Analyst - Intern

Nov 2024 – Dec 2024

HERE Technologies, Cairo, Egypt · Hybrid

- Acquired hands-on experience in geospatial analysis, focusing on data manipulation, visualization, and extracting insights.
- Gained proficiency in utilizing geospatial tools and technologies.
- Collaborated on projects involving geospatial data integration and mapping for real-world applications.

Summer Intern - Business Analyst Trainee

Jul 2024 – Aug 2024

Ministry of Communication and Information, Cairo, Egypt · Hybrid

- gained in-depth knowledge of Business Analysis, focusing on understanding and defining business needs to propose effective solutions.
- learned about business process mapping, which involves visually representing the steps in a business process to identify areas for improvement.

Summer Intern - Networks and Telecommunication

Aug. 2023 – Sep. 2023

Nokia, Cairo, Egypt · Remote

- Acquired knowledge on diverse network technologies including 4G, 5G, and fixed networks.
- Gained insights into AI and ML applications in the field of network and telecommunication.

PROJECTS

Study Partner (Graduation Project) | Python (Django), React

2025–2026

- Developed an AI-powered study assistant that leverages Retrieval-Augmented Generation (RAG) to answer academic questions, generate personalized quizzes, and evaluate user performance.

Image Synthesis with GAN | Python (PyTorch)

25/26

- Trained a variant of Generative Adversarial Network (GAN) to generate realistic images from random noise.

Crowd Person Tracking with YOLOX and BoostTrack | Python (YOLOX, BoostTrack)

25/26

- Implemented a real-time crowd tracking system using the YOLOX object detector integrated with the BoostTrack algorithm for multi-object tracking.
- Processed public datasets (e.g., MOT17, CrowdHuman) and evaluated tracking performance using standard metrics such as MOTA and HOTA.
- Optimized detection-tracking pipeline for crowded scenes by tuning detection thresholds and managing ID switches.

German-to-English Translation Model | Python (PyTorch)

24/25

- Implemented a Transformer-based model from scratch to translate German to English.
- Trained the model using German-English datasets, optimizing for translation accuracy.

Chat bot Web Application | Rust

22/23

- Developed a web application using Actix Web that allows users to hold conversations with a chat bot.

Student Affairs System | Python (Django)

22/23

- Created a CRUD web application for managing student information.

ACHIEVEMENTS

Winner of GenAI Agent Hackathon by Stakpak: Designed and implemented an innovative solution leveraging autonomous AI agents to automate documentation validation.

Winner of HERE Technologies Hackathon: Developed a geospatial data analysis solution to extract insights from probe data.

Participant in Orange Egypt Hackathon: Conceptualized and presented an innovative tech-driven solution with strong business value.

Participant, NASA Space Apps Challenge 2025: Developed an AI-powered information retrieval system using Retrieval-Augmented Generation (RAG) to process and extract insights from large document datasets.

TECHNICAL SKILLS

Programming Languages: Python, C, C++, C#, Java, Rust, JavaScript, TypeScript, HTML, CSS, SQL, Bash

Artificial Intelligence : DL, NN Design, Transfer Learning, Fine-tuning LLMs, OpenCV, NLP, Generative AI, RAG Systems

Full-stack: Wordpress, Django, Flask, React, Actix Web (Rust), Node.js, Flutter.

Cloud & DevOps: Docker, Github actions, AWS cloud, Git, Unix.

ABOUT ME

I am a full-stack developer with strong experience in artificial intelligence, focusing on natural language processing (NLP), computer vision (CV), and large language models (LLMs). I have worked extensively on training and fine-tuning AI models to solve complex problems and enhance real-world applications. Combining a solid foundation in software development with deep knowledge of machine learning, I enjoy creating intelligent systems that integrate advanced AI capabilities into practical, user-focused solutions.
